**Backlights**

Patented SCHOTT-FOSTEC Backlights are calibrated to provide bright, even illumination for Microscopy and Machine Vision applications.

**FEATURES**

- Calibrated from ±13 to ±15 gray scale levels at a mean of 200, gamma setting of 1.0, using a patented process to create diffuse, uniform illumination within the active area. Line scans are available upon request.

- The white acrylic diffuser plate provides the optimum combination of uniformity and intensity. The backlight housing is made of rugged, black anodized aluminum. The plastic fiber bundle is protected with flexible PVC covered metal tubing.

- Use with strobes and DCR® series and ACE® series halogen light sources. Other sources, particularly those without an IR filter, may damage the plastic fibers.

- All our dichroic color filters can be used on the products in conjunction with the A08931 backlight color filter adapter (see photo to left). More details can also be found in the Fiber Optic Accessory section of the product catalog.

**ADVANTAGES**

- Compact, low profile housing fits in small spaces.

- Can be used to create a crisp edge definition, or soft, diffuse incident light.

- Dual and quad backlights increase lighting versatility. Additional combinations and sizes can be custom ordered.

**APPLICATIONS**

- Glass inspection
- Edge Detection
- Surface Inspection

PANELite® Backlights

A versatile addition to the extensive line of our patented backlights

FEATURES

✱ Patented process creates diffuse, uniform† illumination within the active area.
✱ Slim profile to fit the most restrictive space requirements.
✱ Same dependable performance built into three standard configurations.
✱ Flexible panel (A23000) can create a seamless, curved background.
✱ When used with a curved diffuser (customer supplied), the "PANELite" backlight is ideal for multiple camera inspection of cylindrical surfaces.
✱ "PANELite" backlight, A23000 can be trimmed to final size.
✱ Use with strobes and DCR® series and ACE® series halogen light sources. Other sources, particularly those without an IR filter, may damage the plastic fibers.
✱ All our dichroic color filters can be used on the products in conjunction with the A08931 backlight color filter adapter. More details can also be found in the Fiber Optic Accessory section of the product catalog.
✱ 40" (1016) flexible fiber bundle.
✱ Economical - works without a housing.
✱ IR filter on every unit.
✱ Available from stock.

†Uniformity tolerance varies with size of active area. See technical specifications on reverse side.

SPECIAL CONFIGURATIONS FOR OEM & VISION INTEGRATORS

✱ "PANELite" backlights can be manufactured with different active areas, placement of outputs and mounting hole locations. Lead time required. Call for a custom quote.

TYPICAL APPLICATIONS

✱ Glass inspection
✱ Edge detection
✱ Photography
✱ Instrumentation display

*Dimensions in ( ) are in mm
**PANELite® Backlights**

Transmits visible light - from 400nm to 700nm
Temperature limit 0° to 70°C

**UNIFORMITY SPECIFICATION**
* Area of calibration is 3" x 5" (76 x 127mm)
* Calibrated to ±15 gray scale levels at a mean of 200, gamma setting of 1.0
* Tested with a .118"(3mm) white acrylic plate, spaced .3" (7.6) from panel.
  *(Call manufacturer for set up specification)*

**Please Note:** A 3" (7.62) border does not meet this specification on panels larger than 1.5" x 1.5" (38x38). Uniformity specification for custom panels smaller than 1.5" x 1.5" (38 x 38) or larger than 4" x 6" (102 x 152) will be provided with quote.

---

**WARNING:**
This product contains plastic fibers. To avoid fiber damage use only with “FOSTEC” or other approved light sources. Do not use input filters or diffusers without a “FOSTEC” adapter. Thermal transfer may cause damage to the fibers. All “PANELite” Backlights have permanent input IR filters which must be kept clean. Clean panels with isopropanol only. OTHER SOLVENTS will damage the fiber and affect uniformity.
